

LensCoat® Panasonic 200mm f/2.8 POWER O.I.S. INSTRUCTIONS

Piece 1 - Lens Hood Cover

Remove the lens hood cover from the lens. Piece 1 has a hole near one end of the cover to accommodate for the lens hood locking knob. The cover extends a little bit past the back of the lens hood to cover a small section at the end of the lens barrel. Carefully slide and stretch the lens cover into place without putting too much stress on the lock knob hole.

Due to the narrow diameter of the lens hood in relation to the lens barrel you are not able to reverse the lens hood with pieces 2,3, and 4 on the lens.

Piece 2/2A

The LensCoat kit includes two pieces that can be used on the aperture ring section, one with a window and one without. Slide piece 2/2A down to the aperture ring.

Piece 3

Slide piece 3 down to the focus ring.

Piece 4

Slide piece 4 down the lens aligning the Memory controls and limiting switches. **For final placement, pull the distance scale window slightly away from the lens and adjust to the left or right.**
****You should be able to slide the controls through the plastic window with your finger. Some people like to punch small holes in the plastic to allow for easier access. If you choose to do this, be careful as it is easy to destroy the window**

Piece 5

Slide piece 5 down the lens aligning the window with the AF/MF/OIS switches. **For final placement, pull the distance scale window slightly away from the lens and adjust to the left or right.**

Piece 6 1.4x TC

Align the cut out for the teleconverter release and alignment dot and carefully slide and stretch the cover into place over the teleconverter.

Rotating Lens Collar

The LensCoat® for the Panasonic 200mm f/2.8 lens cover kit includes a strip of neoprene with adhesive tape applied to the back. Cut out the desired length for the parts of the lens collar you want to cover. Cut the longest piece first. After all the cutting is done then remove the adhesive tape backing by carefully folding back a small corner and apply to the lens collar.
